Annotatsiya. Ushbu maqolada zamonaviy axborot texnologiyalari yordamida ingliz tilini o'qitish usullari muhokama qilinadi.

Kalit so'zlar: zamonaviy axborot texnologiyalari, ingliz tili, onlayn resurslar;

Аннотация. В данной статье рассматриваются способы обучения английскому языку при помощи современных информационных технологий.

Ключевые слова: современные информационные технологии, английский язык, онлайн-ресурсы;

Abstract. This article discusses ways to teach English using modern information technologies.

Keywords: modern information technologies, English, online resources.

At the present time everything more often rises question about use of modern technologies in the educational process. These are not only new technical means, but also new forms and methods of teaching, the application of a new approach in the learning process. The main goal set by the teacher, using modern technologies in teaching a foreign language, is to show how technologies can be effectively used to improve the quality of teaching English to students of a modern school, the formation and development of their communicative culture, mastering practical speaking skills.

In this article, we want to emphasize that the role of using modern technologies in teaching English with the help of information technology is an urgent problem of our time. Various approaches and methods are considered that students can use to improve their knowledge of the English language, while using modern teaching technologies. This includes various websites for learning English, computer programs for learning the language, electronic dictionaries, various messengers, training videos.

The introduction of information and communication technologies (ICT) in education creates new learning paradigms. The modern world is constantly evolving, we must remember that the breakthrough of technology is the basis of the educational process. Therefore, education is faced with the need to create an environment in which the student can effectively develop knowledge of the English language, namely the skill of speaking and grammar. In order to effectively develop the speaking skill, students can use various modern information technologies that will allow them to learn a foreign language at home. Such technologies include various online English schools, digital dictionaries, and various chats. Students can improve their grammar skills with the help of resources such as online simulators, games, tests.

The continuous growth of the development of modern information technologies allows to overcome barriers in teaching and learning English. Modern

technologies in the field of teaching and learning English allow the subjects of the educational process to continuously receive resources for the development of speaking, grammar and listening skills .

In addition, modern information technologies make it possible to rationally allocate a person's time resource. With the help of modern technologies, the teacher prepares assignments for classes with students faster, spends less time preparing for classes. In turn, students with the help of modern technologies can hone their knowledge using various Internet resources.

Today, a computer is an integral part of every classroom, with its help a teacher can conduct an online tour , an online conversation with a native speaker of a foreign language, use technology to supplement and improve the learning process.

Modern technologies make it possible to study remotely. The advantage of modern information technologies is that the student and the teacher can carry out the learning process, being in different places. With this format of learning, students are not within a certain time frame. The student can start completing assignments at a convenient time for him. All he needs is a computer and access to the Internet.

Modern technology allows group learning. Some argue that this kind of distance learning cannot help students get the support of traditional group learning. Their claims are misleading, as technology has helped provide remote learners with online communities, live chats. All this allows students to collaborate and communicate, even if they are isolated from each other.

Modern technologies allow the student to develop at a pace that is comfortable for him. In this process, he can be helped by: multimedia tools, online learning. Such a learning process allows students to adjust their knowledge and develop in a certain direction, individual for each student. One of the advantages of using modern information technologies is the coverage of a large number of students. This process is common in online English schools. Where one consultant can deliver a lecture to a large online audience.

The obstacles to the use of modern information technologies are that for educational technology to have a positive impact on students, it must be well designed and prepared. The tools used to disseminate information should be designed with learners in mind. There are also factors such as lack of computer/technological literacy that need to be considered. Schools and businesses should keep in mind that educational technology is just a tool and its success depends a lot on the amount of planning that goes into it. The use of modern educational technologies can be the right choice, provided that all these factors are taken into account.

With the development of modern information technologies, foreign language teachers are increasingly thinking about effective ways to create a better foreign language learning environment, which is supported by multimedia technologies. As a result, computer language learning is becoming increasingly popular in the

field of foreign language teaching. Based on the analysis of these features, it can be concluded that multimedia plays an important role here.

Multimedia English teaching is one of the newest methods that has both strengths and weaknesses. Teachers, who consider the most important factor in the effectiveness of teaching, should make full use of multimedia tools to create an authentic language learning environment in which students can easily and effectively acquire the language.

Multimedia is a combination of text, sound, images, animation and video. Typical setups include a CD-ROM, CD-ROM player, audio hardware, and special hardware that allows complex graphics to be displayed. With the rapid development of the Internet, which has become a powerful medium of information, it provides a range of services, including: e-mail, the World Wide Web (WWW), newsgroups, voice and video conferencing, file transfer and sharing.

However, the use of multimedia in teaching English is not as widely used as expected. The reason for this may be the underdevelopment of technology and the immaturity of pedagogy for the use of multimedia in teaching foreign languages. For example, the cost of multimedia is high and not all educational institutions can take advantage of this tool. In addition, many teachers are not trained in the use of multimedia for teaching English.
